

**ABSTRACT**

In the data processing terminal 30a, when the body sound data is generated by the data processing section 38, the body sound ID is given to the concerned body sound data by the control section 31. Then, when the patient ID, operator ID of the operator, sound collector ID of the used sound collector, are inputted through the input section 32 as the additional information of the body sound, the information of the sound collection date and time and the information of the sound collection position of the sound collector M are acquired by the control section 31 when the body sound is sound-collected. When the body sound data is stored in DB 20, each information of the body sound ID, patient ID, operator ID, sound collector ID, sound collection date and time, and sound collection position, is corresponded, and written in the body sound registration table 26.
